# Bodies of Water

Rivers are large bodies of flowing water. Some of them flow into lakes or into other rivers. Others flow into the oceans. They are all freshwater.

We use rivers to move goods from place to place inexpensively. Large vessels, called barges, full of goods are floated up and down them. Rivers have many fish and plants living in them.

Ground water is another type of water. When it rains not all of the water flows into the rivers. Some of it soaks into the ground. This ground water is important to us.

Rivers are large bodies of flowing water.

Read each question. Write your answer on the lines.

What is ground water? \_\_\_\_\_

---

---

What is a barge? \_\_\_\_\_

# Bodies of Water

The Great Salt Lake is much saltier than the oceans. Another lake like this is the Dead Sea in the country of Israel. Because the water is so salty it makes it heavier and people float in it much easier.

of Canada.

The United States has five very large freshwater lakes which we call the Great Lakes. They are all connected together in east central, North America. They touch large portions of eight states and hundreds of miles

The Great Lakes have been very important to the growth of the states and provinces they touch. The ease of shipping products on them helped large cities like Chicago, Illinois to become what they are today.

Do some research. Find the names of the five Great Lakes in the United States. Write their names on the lines.
